

Examination Datesheet — Clash Analysis Report

Abasyn University Islamabad Campus | B.Tech Program Date Sheet, Mid Term Examination, Fall 2026

STATUS: CLASH-FREE — No student has two papers in the same slot.

1. Datesheet Summary

Students	Courses	Batches	Exam Days	Slots/Day	Papers/Slot
74	48	18	7	3	2

Exam window: 31-Oct-2026 to 06-Nov-2026. Merges applied: 26. Sundays and any marked public holidays are excluded automatically.

2. Clash Analysis (verified against the registration data)

Clash Type	Count	Affected	Meaning
Student clashes	0	0 students	One student, two papers, same day & same slot — the real conflict. Must be zero.
Two papers same day	5	5 students	One student with two papers on one day, but in different slots (morning + afternoon). Allowed, kept as low as the window permits.
Batch overlaps	22	7 batches	Same batch label in a slot — usually different students (soft).

The **student clash** count is the figure that matters most — a student asked to sit two exams at the exact same time. This datesheet also spreads each student's papers across days: the **two-papers-same-day** row counts students who still have two on one day (in different slots), which the scheduler keeps as low as the exam window allows. Batch overlaps are harmless — different students within one batch take different electives.

3. Scheduling Rules Applied

- Conflict-free placement via graph-colouring: courses sharing any student are guaranteed different slots.
- No department is pinned to the first slot; the three English papers share one slot.
- Merged courses (different codes, same paper) are always placed together in a single slot.
- Load-balanced: papers are spread evenly across every day and slot, so no single slot is overloaded.
- Rooms first, labs as overflow: All slots fit within the 40 rooms — no labs needed.

Generated automatically by the Abasyn Scheduler engine. Clash figures are computed directly from the student registration dataset used to build this datesheet.
